Seed

Brand book

The mark, the lockups, the colours and type, the pieces of the interface and the way Seed speaks. Everything here is taken from the site as it ships.

Version 1.0 · October 2026 · seed-nu-ten.vercel.app

What Seed is

A launchpad for raises on Solana. Buy into an idea at one fixed price, paired with SOL or USDC. If it fills, the whole raise opens a Meteora pool that is locked for good. If it misses, every wallet gets back exactly what it paid.

A raise sells its token at a price set by its target. Fill it and the whole raise opens a Meteora pool, locked for good. Miss it and every wallet is refunded, fee included.

Live

Open

Backers buy at the fixed price until the target or the deadline.

Seeded

Filled

The supply is minted, the pool opens and its liquidity is locked for good.

Refunded

Missed

Nothing is minted; every backer claims back what they paid, fee included.

Logo iterations 06

Lockups and the app icon 07

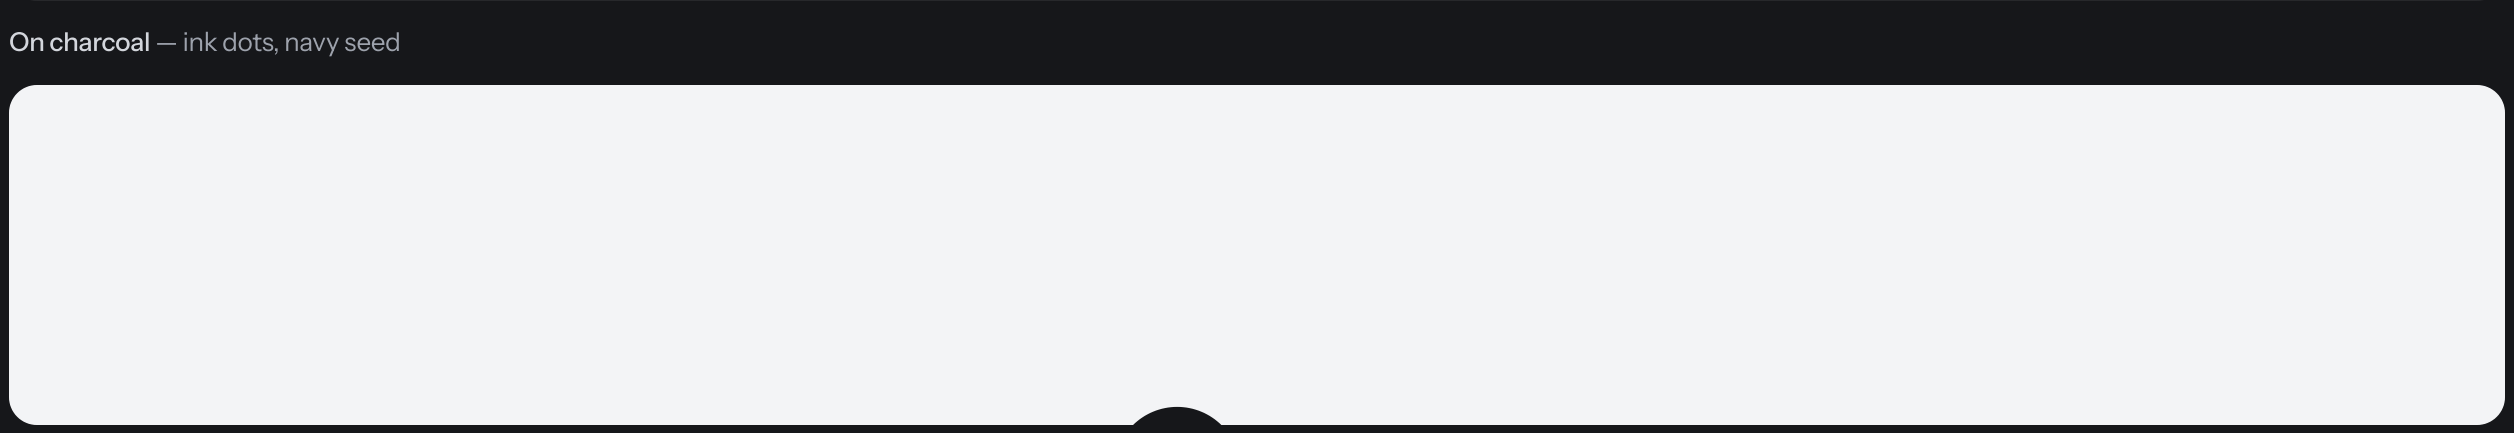

The mark

Twenty-one dots. Twenty shrink as they spiral out from the centre; one, the seed, is the only thing in blue. The mark is the site's one picture: a raise is many small wallets gathering around one idea.

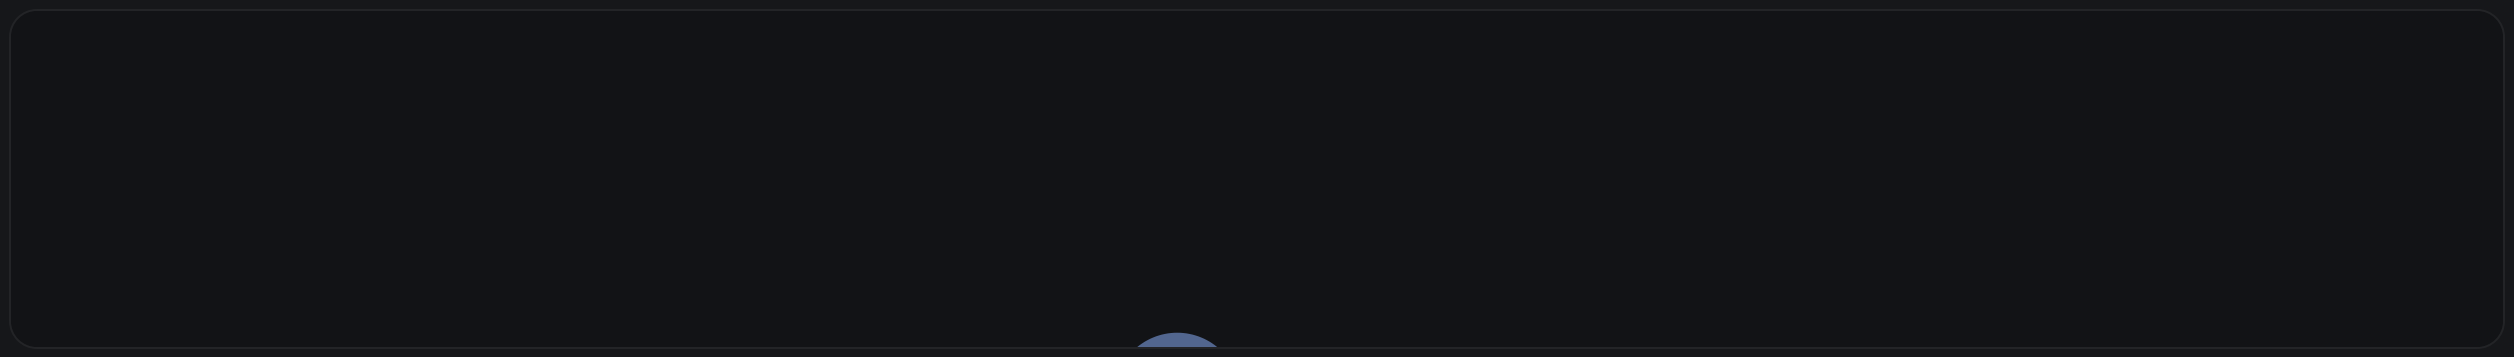

The dots are the text colour of whatever they sit on (ink on charcoal, charcoal on light); the seed is `#5B8CFF` on dark and `#2E63E7` on light. The dots never take another hue. There is no outline, no container and no gradient inside the mark itself.

On charcoal — ink dots, navy seed

On light — charcoal dots, blue seed

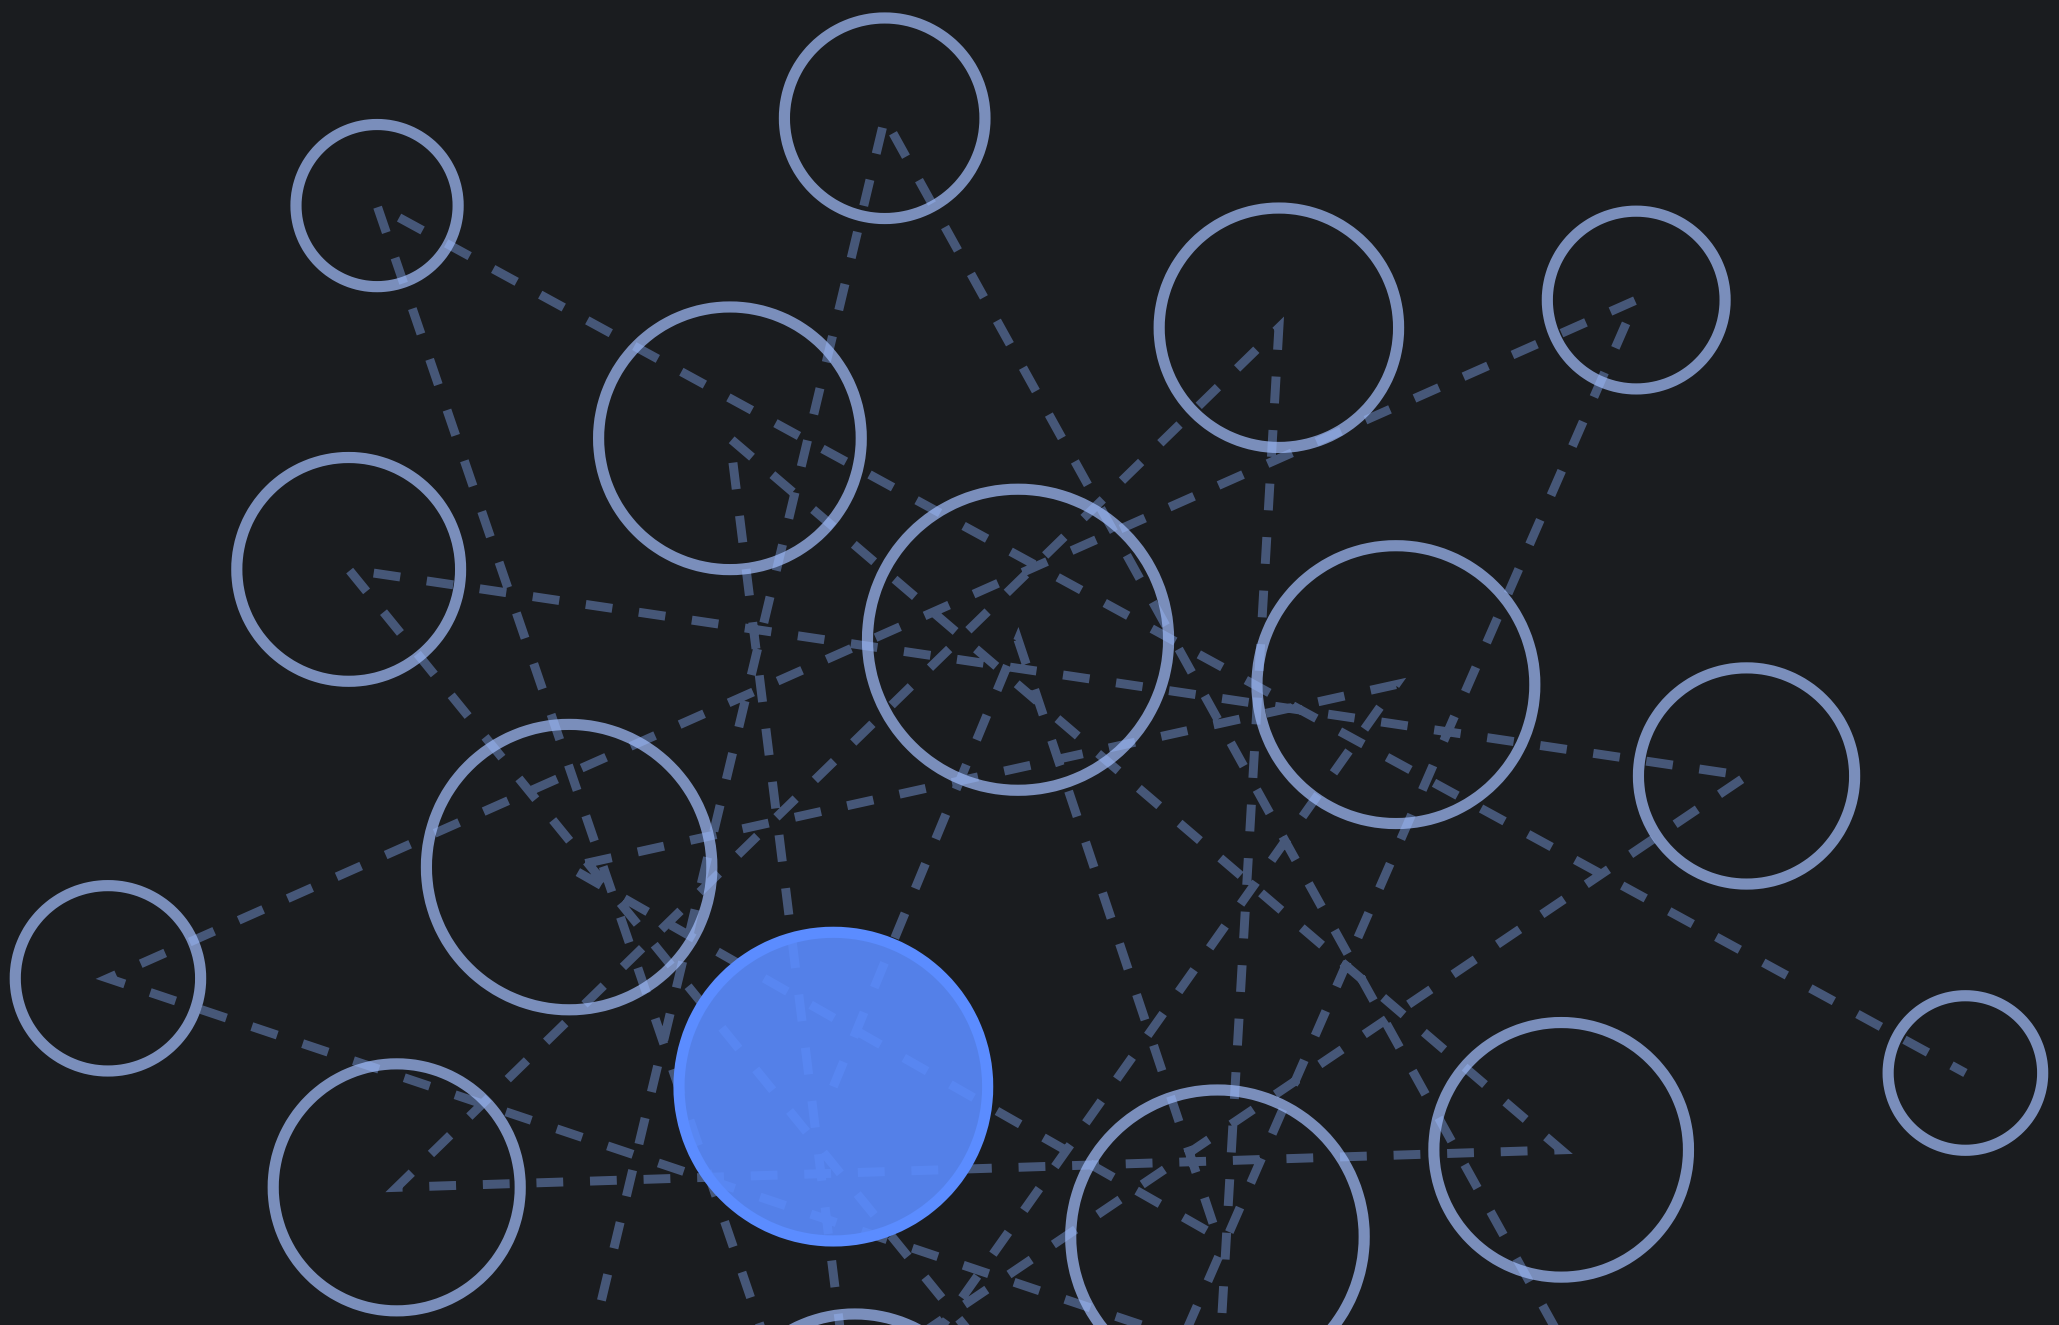

Muted — the rail and the app bar: #52668F dots

Construction, clear space, size

The geometry is fixed. Use the files; never redraw the dots.

Construction

Dos and don'ts

One mark, one blue, one orientation.

Do use the mark as supplied

Do use the muted version on bars and rails

Do go one colour when there is one ink

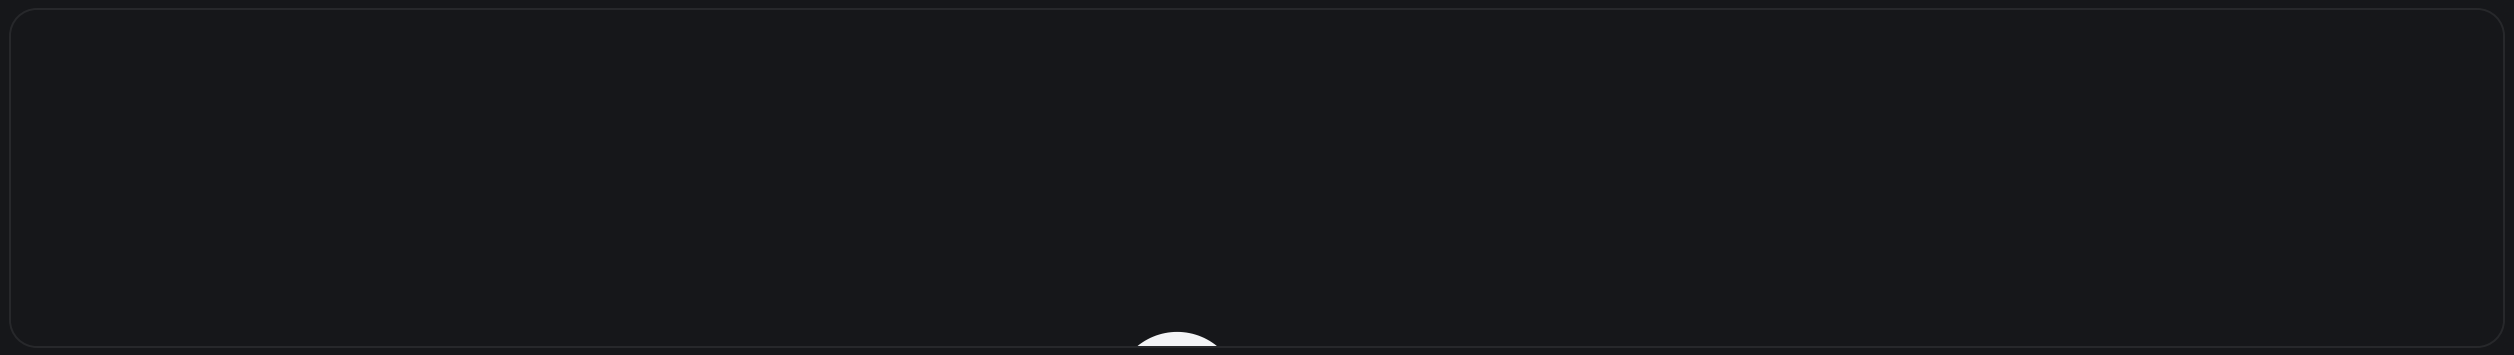

Do let a glow sit under it in a hero or a banner

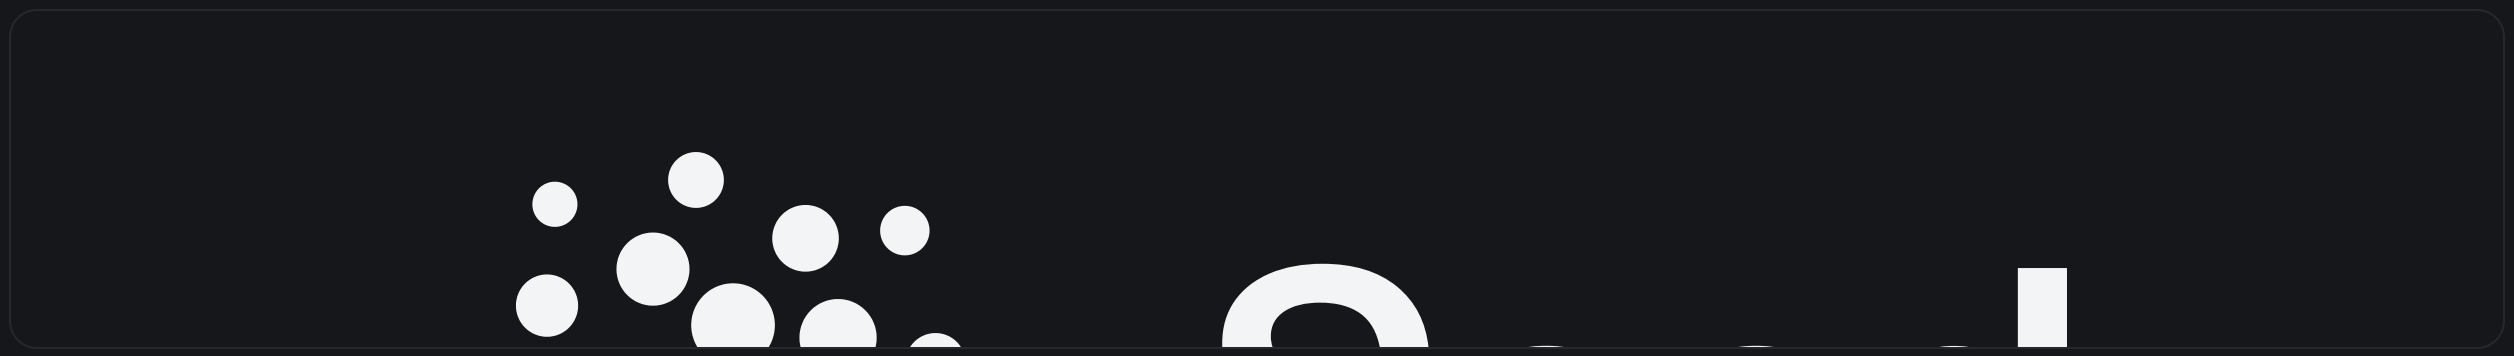

Five iterations

The mark leads. The others are for the places it does not fit alone: a header, a footer, a one-colour print, a quiet surface.

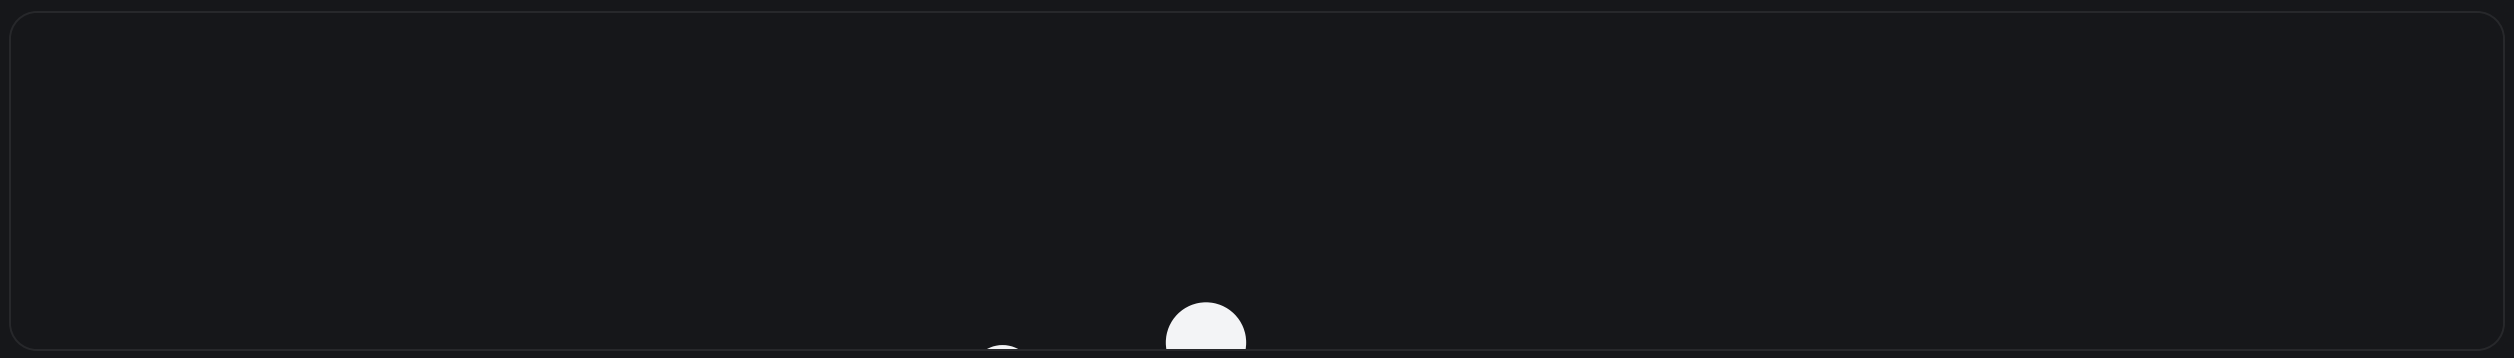

1 · The mark

Primary. Avatars, favicons, the rail, the hero.

2 · Horizontal lockup

Headers and footers, partner strips, the top of a document.

3 · Stacked lockup

Square placements: a share card, a sticker, a slide close.

Lockups and the app icon

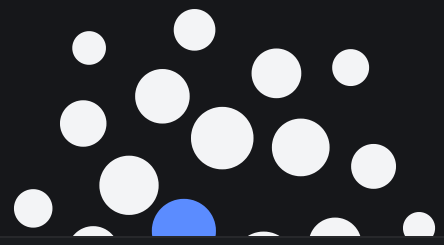

The wordmark is Instrument Sans at weight 600 with −3% tracking, set in the text colour. The mark's box is 1.6× the wordmark's em in the horizontal lockup and 1.9× in the stacked one.

Horizontal

Mark box	1.6 em of the wordmark
Gap	0.4 em
Baseline	wordmark's cap height centred on the box
Where	The site's app bar below 1024px, the docs header, documents, partner strips

Stacked

Mark box	1.9 em, centred over the wordmark
Gap	0.34 em
Where	Square and portrait placements, the end slide, stickers

Colour

Charcoal is the one theme. The greys are neutral and step lighter as a surface comes forward; blue is the only colour that is not data. Greens, yellows and reds mean something and are never decoration.

Background · --bg

#16171A

Every page. The flat charcoal under the dot field.

Paper · --paper

#121316

The well: fields, the search box, segment tracks (--well #111215 in delta.css).

Panel · --panel-solid

#1F2125

Sticky bars, art frames, inputs. Frosted panels are rgba(31,33,37,.18) over the field.

Card · --card

#25272C

A surface inside a panel.

Colour, continued

The accent tints, and the colours that carry meaning. A green is always seeded, up or passed; a red is down, failed or sell. Neither is ever decoration.

Navy deep · --navy-deep

#A4C0FF

Accent text, rail labels, the fill strip, chip icons.

Navy soft · --navy-soft

#52668F

The muted mark, quiet outlines.

Pill · --pill

rgba(46,99,231,.24)

The tint under a chosen segment and the wallet button (Delta: --grad-seg).

OK · --ok

#45DB93

Seeded, up, a passed check. Ink #7BE8B2, wash rgba(69,219,147,.14).

Typography

Three families from Google Fonts, each with one job. Sans for everything, the serif in italic for the first phrase of a heading, mono for every figure.

Instrument Sans 400 · 500 · 600 · 700

Body 15.5px
-1.1% tracking
line 1.55

A raise sells its token at a price set by its target. Fill it and the whole raise opens a pool.

Headings 500
-4.5% tracking
line 1.05

Start a raise

Wordmark 600
-3% tracking

Seed

Labels 12.5–13.5px
500 · muted

Market cap Change Raised Backers

Instrument Serif 400 italic

The leading phrase
1.1× the heading
-2% tracking

Back the idea, at one fixed price.

Only in headings

The italic opens a heading and stops after two or three words. It never sets body text, buttons, labels or the wordmark. Roman serif is not used.

Interface elements

Rendered here with the site's own CSS. Buttons are pills, the chosen state is a lit, bordered block, every figure is mono, and surfaces are glass over the dot field.

Buttons

Start a raise · How it works · Back it · Closed

Primary: --grad-btn, lit top edge, glow. Secondary: the chip tint with a hairline. Icon buttons are 36px squares, radius 10. Nothing is ever a bare blue rectangle.

Segments and tabs

All 30 · New ideas 1 · Seeding 2 · Seeded 27

Price · Market cap · Buy · Sell · Buy · Sell

A dark well with a hairline; the chosen segment is --grad-seg with the --seg-line border and a small glow. Buy and sell are the only segments that take green or red.

Chips and badges

3 live · $412.8K raised · $103.8 SOL

1 · 12 · Live · All checks pass · 1 to look at · 1 fail · Demo · Refunded

Stat chips carry one mono figure and a muted unit. Rank badges share the segment gradient. Check chips are the only place the semantic colours appear as fills.

Fill strips and progress

62% · live

100% · seeded

38% · refunded

64.13 / 85.00 SOL

The barcode strip (2px bars on a 5px pitch) is the fill in a table; blue-white while live, green once seeded, faint when refunded. The 3px progress bar under a raised figure runs red through yellow to green.

Surfaces and textures

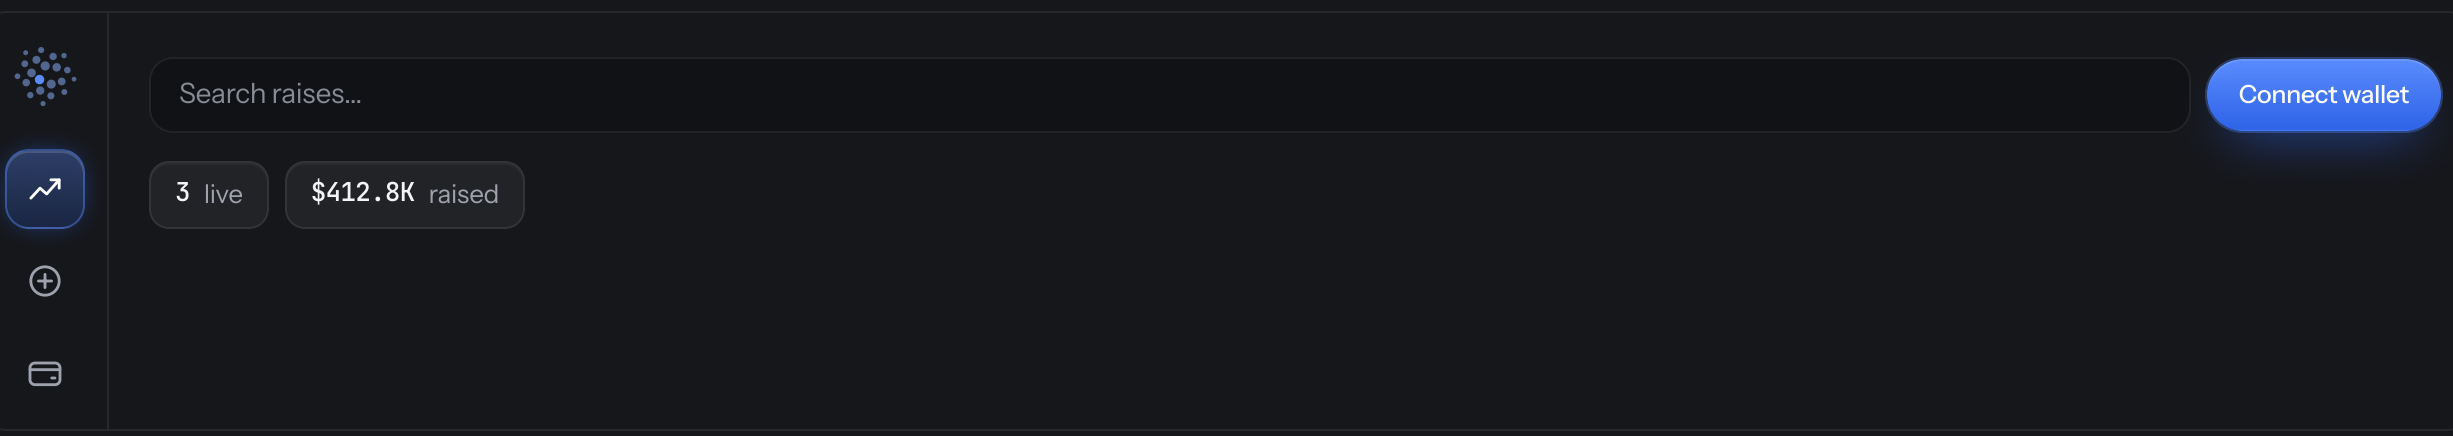

The page is a dot field over charcoal. Panels are frosted glass; the content sits between two hatched gutters; a thin rail of icons runs down the left.

A panel

rgba(31,33,37,.18) with blur(26px) saturate(130%), a 1px line at rgba(255,255,255,.1), radius 16, and a 1px inner highlight.

The dot field and glass — js/bg-dither.js draws blue-tinted dots dithered from noise; panels show it through the blur.

Hatch — repeating-linear-gradient(135deg, rgba(255,255,255,.045) 0 1px, transparent 1px 9px). The 12px gutters either side of the app, and a texture for a banner's panel.

The rail and the app bar — 64px rail with the muted mark; icons are 1.7px strokes, the current one lit like a chosen segment.

Iconography

Voice and tone

Seed talks the way a careful person explains money: plainly, in full sentences, with the number right there. It never sells.

Principles

Say raise.	A raise, a backer, a founder, a target, a deadline, a pool. Never presale, launch, mint drop, IDO, degen, ape, moon.
Plain words, full sentences.	"Fill it and the whole raise opens a pool, locked for good." One idea per sentence; the verb is early; no semicolons in the interface.
The number is the point.	Give the figure, its unit and what it is relative to: "64.13 / 85.00 SOL", "1% on top", "a 1.25% pool fee". Round only where the site rounds.
Honest about state.	"Live on Solana devnet: real transactions, test SOL with no value." Demo is marked Demo. A missing reading is "—", never a guess.
Quiet case, no exclamation.	Sentence case everywhere, including buttons and column heads. No exclamation marks, no emoji, no all-caps except tickers.
Address the reader.	"Your positions", "what you paid". Seed is "Seed" or "the program", never "we".

In practice

Banners

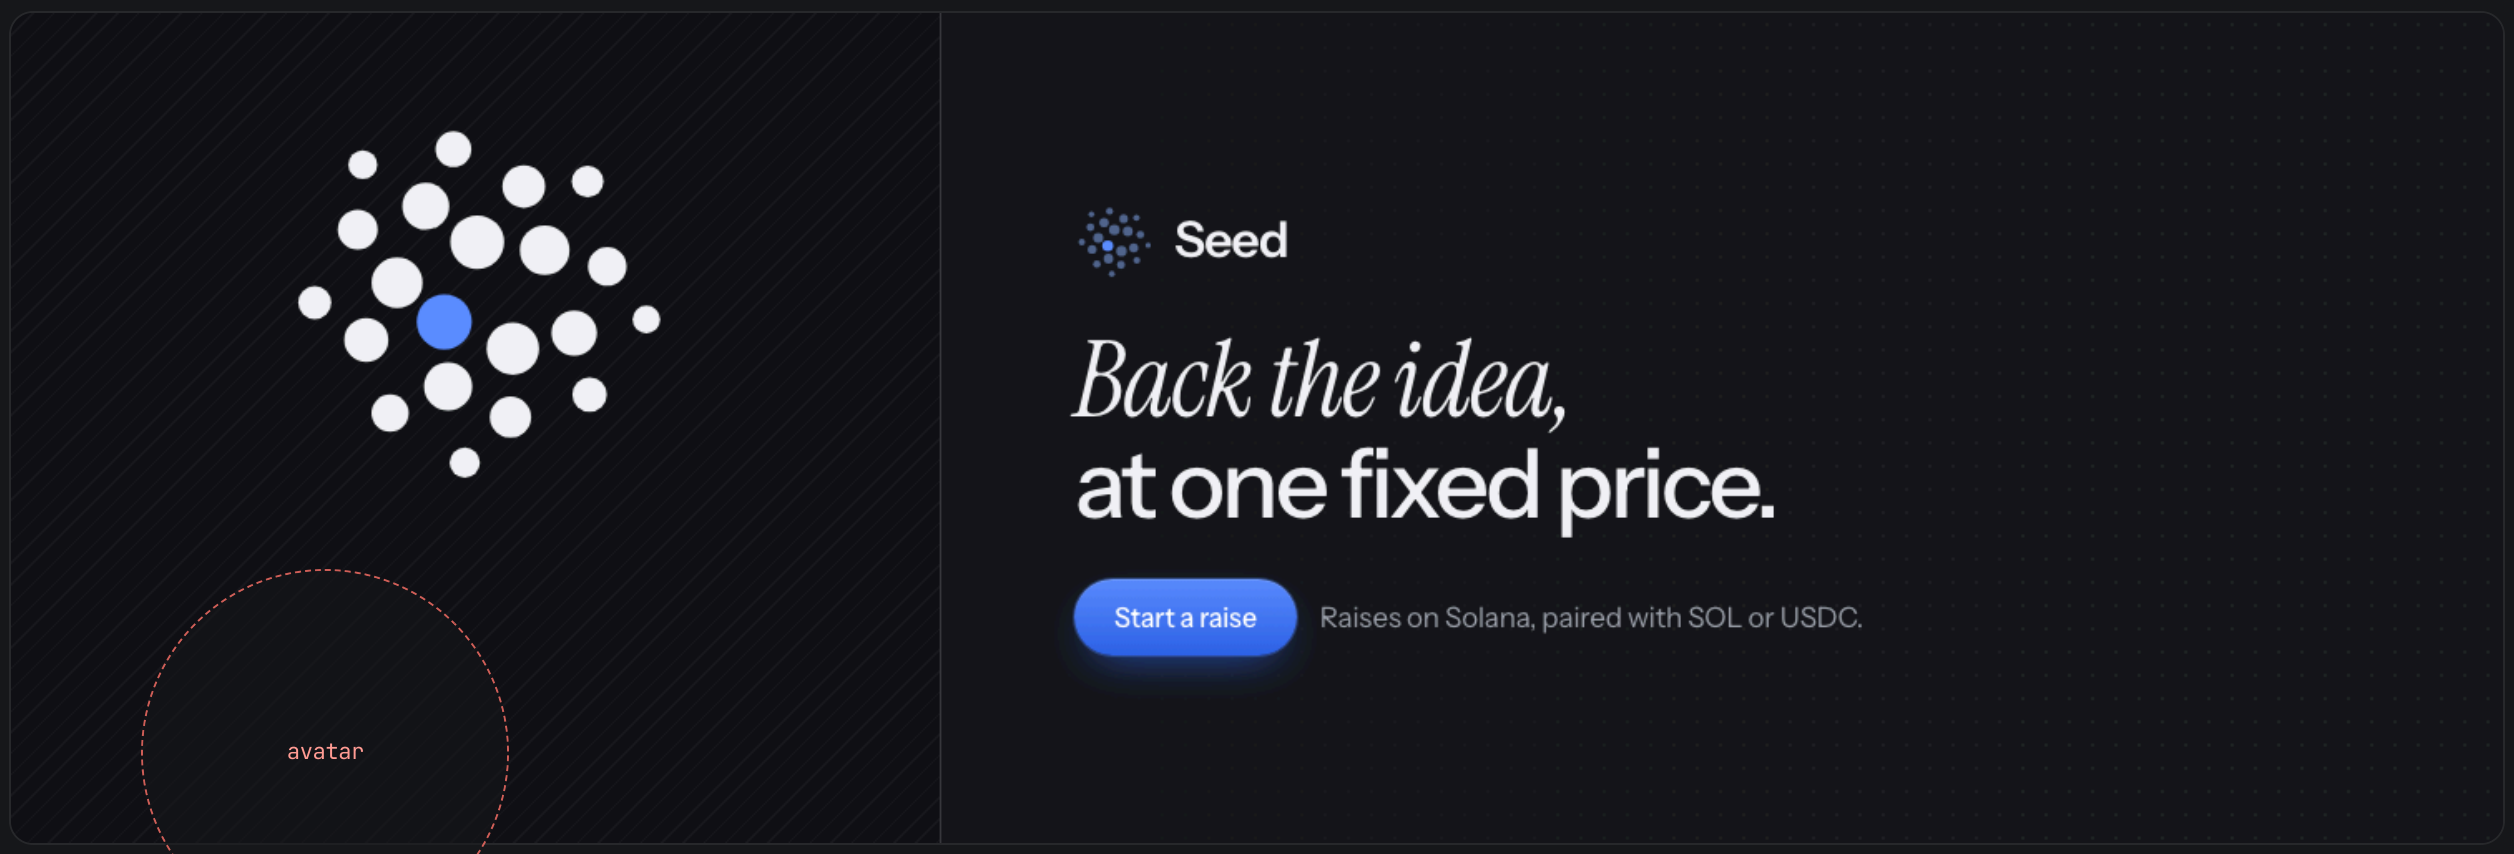

Five headers at 1500 × 500 for X and similar. The dashed circle is where X lays the avatar (roughly the lower left 400 × 400 with its centre inside the banner), so nothing that matters sits there; the mark's own avatar goes in that slot.

1 · Minimal — the mark alone over a thinned dot field, the lockup top right. For the main account.

Banners, continued

5 · Split — a hatched paper panel carrying the mark, a plain half with the line and a call to action. For a founder-facing account.

Using them

Size	1500 × 500 px, PNG. X shows about 1500 × 500 on desktop and crops the top and bottom ~60px on phones; nothing important sits within 60px of either edge.
Avatar	Use `logo/seed-icon-charcoal.png` (512) or the bare mark on charcoal, `logo/seed-mark-dark.png`.
Editing	Each banner is an HTML file in `banner/` with the site's tokens inline; change the copy or figures there and re-render with `_src/render.sh`.
Other sizes	For 1200 × 630 (link previews) or 1080 × 1080 (posts), take banner 1 or 4 and re-centre the mark; keep the clear space rule.

File index

SVG is the source for every logo; the PNGs are 1024px renders (512 for the icons) on the background they are meant for. Fonts are in `fonts/` for the HTML sources; the brandbook itself is `brandbook/index.html` and `brandbook/Seed-brandbook.pdf`.
