SEED PRESALE

Lattice

Shared DCA vaults for JUP stakers.

THE PROBLEM

Why Lattice

- Small DCA orders pay the same fixed costs as large ones.
- Stakers DCA the most and hold the longest.

THE PRODUCT

How it works

- Orders in a vault are netted against each other first.
- One larger order gets a better route.
- Stakers keep their voting power the whole time.

THE RAISE

120,000 JUP target, paired with JUP

- Presale backers: 40%
- Locked pool: 40%
- Team, 6 month cliff, 2 years: 12%
- Treasury, 3 month cliff, 18 months: 8%

TEAM AND ROADMAP

Who builds it, and what is next

- Priya Raman, founder and engineering
- Jonas Lund, netting program
- Mei Chen, growth

ROADMAP

- Netting program on devnet, shipped
- Audit, shipped
- Mainnet vaults
- Integration grants
