SEED PRESALE

Tidewater

Index vaults built from tokenized stocks.

THE PROBLEM

Why Tidewater

- Tokenized stocks trade on Solana, but holding a basket means many trades.
- Funds that do this for you are opaque about what they hold.

THE PRODUCT

How it works

- Deposit USDC, receive one token that tracks a basket.
- Weekly rebalancing against Jupiter quotes.
- Redeem for the underlying xStocks at any time.

THE RAISE

60,000 USDC target, paired with USDC

- Presale backers: 40%
- Locked pool: 40%
- Team, 6 month cliff, 2 years: 12%
- Treasury, 3 month cliff, 18 months: 8%

TEAM AND ROADMAP

Who builds it, and what is next

- Aiko Tanaka, founder and product
- Ruben Osei, vault program
- Lena Brandt, markets

ROADMAP

- Devnet vaults, shipped
- First audit, rescheduled
- Nasdaq top ten vault on mainnet
